Abstract (en)
The machine (1) has an electromotive lifting gear (30) for lifting a forming station (2), a sealing station (3) and a cutting station (4) and comprising two carriages that are mounted in vertical guides, and a tool connected to the carriages. A collision region of the tool is defined by lifting motion of the tool between lower position and upper position. Two lifting spindles i.e. thread rolling spindles, are arranged parallel to the vertical guides and outside the collision region of the tool. A lifting rail is provided by which the tool is connected to the carriages.
