Abstract (en)  
[origin: EP2746176A1] The bearing plate has a first pressure element that is arranged on the main portion (203) in which the first pressure element is arranged in portion parallel to the main portion. The positioning element is arranged on the main body and opening through which the first pressure element protrudes in portion. The positioning element is formed as a second pressure element. The first pressure element is designed in the shape of a cross. The positioning element comprises a bevel in a region adjacent to the first pressure element. An independent claim is included for a method for positioning containers using a bearing plate.
