Abstract (en)  
[origin: EP2746192A1] The device (10) has a container (12), and an introduction device (20) for introduction of clothing into the container, where the introduction device includes a lateral wall (32), and the introduction mouth is formed into the lateral wall. A set of reception housings is arranged to contain the clothing. An actuation unit (44) swivels the reception housings around a primary axis such that the reception housing passes from one position to another position. An access device provides access to contents of the container, where the axis is approximately vertical. The container is provided in the shape of a cylinder.
