Abstract (en)

[origin: EP2746197A1] The device (1) has a rotating drivable conveyer (4) with an outer side (5) and an inner side (6), where the outer side serves for receiving objects (2). A low pressure chamber includes a part formed by the inner side of the conveyer, and another part formed by a rotating drivable lower pressure chamber belt (18) i.e. flat belt (19). The conveyer and the belt are drivably designed such that the conveyer and the belt are moved in an approximately same direction and with an approximately same speed. The conveyer is laid at the belt during subjecting the chamber with a low pressure.
