Abstract (en)  
[origin: EP2746506A2] The switching lock (3) has a latch bolt (8), which is guided in a bolt guide (7) and is moved between a locking position immersed in a closing plate (5) and a retracted position retracted in the bolt guide. A locking lever is pivotably mounted on the latch bolt. The locking lever cooperates with the bolt guide in a pre-locking position lying between the retracted position and the locked position and holds the latch bolt in the pre-locking position.
