Abstract (en)

The invention relates to an edge beam for a door, said edge beam comprising a laminate comprising a longitudinal extending layer of fire-resistant material interposed between two longitudinal extending layers of wood comprising material, wherein said layer of fire-resistant material is glued to each layer of wood comprising material over adjacent longitudinal edges thereof. The invention further relates to a door, comprising two vertical edge beams and two horizontal edge beams according to the invention that are mutually connected to form a door frame. The invention also relates to a method for manufacturing an edge beam for a door according to the invention.
