Abstract (en)
[origin: EP2746592A1] The arrangement (1) has a valve carrier channel (57) staying in fluid connection with a valve unit (3) i.e. 5/2-way valve. A closure cover (7) of a valve carrier (2) is detachably attached at a mounting surface (12) of a base body (6). The closure cover exhibits a small outline in a plan view than the mounting surface of the base body. The closure cover rests on a frame-like collar-shaped projection (35) of the base body arranged at the mounting surface. The projection projects in a direction of the closure cover concerning an outside surrounding surface portion (12a) of the mounting surface. The base body is designed as a plate-shaped base body and a disk-shaped base body.
