Abstract (en)  
[origin: EP2746595A1] The valve assembly (1) has a valve support module (2a) whose receiving space (27) and the signal transmission space (64a) are formed separately from each other and are connected to each other by contact hole (71), through which the valve unit (3) is electrically contacted with the signal transmission line (63). The vias are fluid-tightly closed by a sealing unit (73). The receiving spaces fluid-tight separated from the signal transmission spaces are continuously vented to the atmosphere pressure relief channel (74), through the valve carrier (2) in the direction of lining.
