Abstract (en)
[origin: WO2013029771A1] A stretching apparatus (1) for physiotherapy comprises a bench (3) with a bench surface (5) for supporting a patient, a holder (35) for the patient's feet, a lifting mechanism (7) with which the height of the holder (35) can be changed in such a way that a patient connected to the holder (35) can be transferred from a lying position to an upside down position, and a positioning mechanism (11, 13) which can be operated independently of the lifting mechanism (7) and permits height adjustment, particularly by a linear shift and/or a pivoting movement, of at least one area of the bench surface (5).
