Abstract (en)
[origin: WO2013026769A1] The invention relates to a dispenser (1) for pasty compounds (M), consisting of a compound housing (2) of tubular shape with feeding piston (7), and with a headpiece (3), which is guided with a spring action on the upper tube piece (9) and has a portioning chamber (18), to which is assigned an inlet valve (35). In order to design a dispenser of this kind with an improved function and a simplified construction, it is proposed that the spring element (25) consists of two U-branches (28, 29) rolling between parallel annular walls (16, 32) of headpiece (3) and compound housing (2).
