Abstract (en)
[origin: WO2013030158A1] System for draining traffic areas, comprising a plurality of elongate receiving channel elements (1) and an outflow pipeline element (10) arranged therebelow, wherein the receiving channel element (1) has an upper side which can be driven over and which is provided with ribs (2) between which receiving regions are formed. Furthermore, the receiving channel element has a lower region which has at least four side walls and is formed in the manner of a basin up to a drain (6) at the lowermost point, wherein the drain (6) can be connected in a water-tight manner to the outflow pipeline element (10). The complete receiving channel element (1) here is formed in one piece.
