Abstract (en)

[origin: EP2562779A1] The drive (100) has a handling system (120) having a lever (125), a handle base (121) comprising locking openings (122,126) respectively. A coupling element (140) is provided for coupling the electrical switching device (200) with handling system. The locking openings are arranged in such a manner that shackle of a shackle lock is passed through two locking openings only if lever is in OFF position. A closure plate is arranged to block locking openings for passage of shackle if switching contacts are not separated.
