Abstract (en)

[origin: EP2749726A1] The fastening device has a base element (24), which is formed at a hollow profile frame (50) to be mounted in a window or a door. An adapter profile (51) is provided which is firmly attached on the frame and a base profile (52) is positively connected to the adapter profile, where a cavity is formed between the adapter profile and the base profile. A fastening element (15) is arranged in the cavity directly or via a thread element (11) to be connected to a reinforcing profile (54). The thread element is accessible from interior of a roller shutter box (20) via a recess in the base profile. An independent claim is included for a roller shutter box.
