Abstract (en)

[origin: EP2749817A2] The device (12) has a tilting protective device arranged at a leading end of fixed rails (17, 18) and running rails (19, 20). A feedthrough region is provided for food carrier edges, where the feedthrough region is upwardly limited and inwardly opened by a guide bracket. Length of the tilting protective device is smaller than tenth of length of the rails. The guide bracket is upwardly located at a base part of the tilting protective device and extended in sections over width of the base part. A recess is formed in the base part below an upper guide-bracket part. An independent claim is also included for an arrangement with a rail extension device.
