Abstract (en)

Disclosed embodiments provide methods and systems for calculating and presenting a positioning performance of a location system. In one aspect, a server may receive a signal including information indicative of a determined location of an asset. Based on the received signal, the server may determine a positioning error value indicating an error in the determined location of the asset. The server may then calculate a metric as a function of the positioning error value, and provide positioning performance information for display based on the calculated metric.
