Abstract (en)
[origin: WO2013029066A1] The invention relates to a drawer (4) with a first wall part (7), a second wall part (8), and a fixing device (15), via which the first wall part (7) and the second wall part (8) can be connected to each other. The fixing device (15) has at least one locking element (16) for locking the wall elements (7, 8) to each other. The locking element (16) has at least one tongue (16a), which is spring-elastic in particular and which can be inserted into a recess (17) of one of the wall parts (8) and fixed in said recess, in particular in a clamped manner. The locking element (16) is substantially designed in a comb-like manner in which two or more tongues (16a) that are spaced from one another in the longitudinal direction of a connecting piece (19) project laterally from the connecting piece (19).
