Abstract (en)

[origin: WO2013030717A1] Refrigerator (1) comprising a plurality of opening/closing modules (100), for access to the loading area (2) in which to store products, wherein each module comprises: at least one sliding door (110) sliding in the longitudinal direction (X), between a closed position and an open position; guide means (120), positioned at the ends of the sliding door (110); - sliding means suitable to permit the sliding of the door comprising means of movement (200) acting in conjunction with the guide means (120); - an inclined plane (300) positioned at the bottom of the sliding door (110) in the guide means (120) in such a way that the sliding door (110) slides and is suitable for translating on said inclined plane (300) in an inclined direction (Y), inclined in relation to the longitudinal direction (X) between the closed position, downstream of the inclined plane (300) and the open position, upstream of the inclined plane (300) and vice versa.
