Abstract (en)

[origin: WO2013030180A1] The invention proposes an apparatus (100) for attaching a seat unit of a vehicle to a body of the vehicle, wherein the apparatus has at least one engagement element (110) and at least one retaining element (120) in which the at least one engagement element (110) can be held. The seat unit can be attached to the body by means of a combination of the engagement element (110) and the retaining element (120). In this case, the at least one retaining element (120) is designed to allow movement of the at least one engagement element (110) in the at least one retaining element (120) from a retaining position to a displacement position along a displacement path in the event of the vehicle colliding with an object.
