Abstract (en)
[origin: WO2013030239A1] A shipping package (1) made of a single corrugated board blank (2) for holding rigid cuboid material to be packaged (9) comprises side wall fields (21, 22) hinged to one another by means of first folding lines (31), forming long sides (11, 12) and facing one another pairwise in a parallel position in the state of the erected package (1), and end wall fields (23), that form end faces (13) and face one another pairwise in a parallel position in the state of the erected package. The end faces (13) comprise peripheral fields (4), which are hinged to one another by means of second folding lines (32) in a row and to a respective associated side wall field (21, 22) by means of third folding lines (33). The end wall fields (23) are hinged to at least two peripheral fields (4) of each end face (13) by means of fourth folding lines (34). In the erected state of the package, at least two end wall fields (231, 232) contact one another in a double layer, and the peripheral fields (4) contact the side wall fields (21, 22) in such a manner that the side wall fields (21, 22), together with the end wall fields (23), form a crumple zone edge (5) drawn in on the package (1) at the end face, providing impact protection.
