Abstract (en)

[origin: WO2013029734A1] 2-drum winder by means of which material fed in a severed state is wound up onto a plurality of winding cores, having two axis-parallel drums (1, 2), which form a bearing means (3) for each roll (4) formed from the winding core and material, and of which one drum (2) is arranged in an adjustable manner by being moved in relation to the other drum (1), and having guide devices (15) for fixing the plurality of winding cores laterally, wherein the guide devices (15), for executing a forced movement, are connected to in each case one machine element (21) which transmits a movement variable for the adjustment of the at least one adjustable drum (2), as a dependent adjustment mechanism, to the guide device (15).
