Abstract (en)

[origin: WO2013029705A1] The present invention relates to a disinfection device for filling machines, wherein a rinse sleeve (17) integrated in the supporting and lifting device (1) can be moved from the rest position (I) to the work position (II, III) and back again. The filling valves (11) are first closed by a dual-action container carrier with CIP rinse sleeve (4) and then have cleaning agent and/or disinfecting agent passed through them.
