Abstract (en)
[origin: WO2013029704A1] Container-treating machine having a multiplicity of treatment positions (4a, 4b) for treating the containers (2) arranged at these positions, wherein the treatment positions (4a, 4b), which are provided on a transporting element, for example on a rotor (3), and are formed on treatment blocks (5, 5a, 5b), have functional elements (6, 7, 7.1) which are necessary for each treatment, at least functional elements for controlled relative movement between the treatment blocks and the containers and/or for controlling liquid paths and/or gas paths and/or vapour paths (14, 20) for liquid and/or gaseous and/or vapour treatment medium and/or for monitoring and/or controlling the treatment sequence and/or actuating elements or actuating drives (17), wherein the treatment blocks each form at least two treatment positions, and at least one functional element which is necessary for treating the containers is provided for all the treatment positions together which are assigned to a respective treatment block.
