Abstract (en)

[origin: WO2013029931A2] The invention relates to a sieve for treating a fluid to paste-like medium consisting of a plurality of layers (5, 6, 7) and having a plurality of sieve openings (1) and an inlet side (3) pointing opposite the flow direction (2) and an outlet side (4) pointing in the flow direction (2). According to the invention, a highly uniform sorting effect is achieved at a highly constant throughput in that the outlet side (4) is formed by a layer (6) having reduced adhesion.
