Abstract (en)

[origin: WO2013030241A1] An optical waveguide body for a light-permeable composite body, a light-permeable composite body and a method for the production of an optical waveguide body and of a light-permeable composite body are provided. Photovoltaic cells can be arranged on the surface of the optical waveguide body, which are then, after production of the composite body, substantially completely embedded in the filling material of the composite body. Photovoltaic cells can also be applied to the surface of the composite body. The photovoltaic cells are preferably applied in a vapor deposition process.
