Abstract (en)

[origin: EP2565347A1] The head (10) has a discharge channel (15) comprising a discharge opening (15a) and connected to an outlet (11) of a reservoir or a mixing device. Another discharge channel (17) comprises a discharge opening (17a), where the former discharge channel and the former discharge opening have a significantly smaller cross-section than that of the latter discharge channel and the latter discharge opening. An end portion of the former discharge channel is curved or angled higher than an end portion of the latter discharge channel. An independent claim is also included for a method for manufacturing glazing elements.
