Abstract (en)

[origin: WO2013029586A1] The invention relates to a pressure tank, comprising a hollow body of thermoplastic material having at least one opening, into which a respective connector piece having at least one passage to the interior of the hollow body is inserted, wherein a sealing flange running around the passage is integrally moulded with the connector piece. The sealing flange is visible from the outside and is welded and/or adhesively secured to the hollow body, on which at least one torque coupling is moulded. The cross-section of the torque coupling is polygonal or non-circular and the torque coupling is inserted in a coupling seat in the hollow body complementary thereto, said coupling seat running around the opening.
