Abstract (en)

[origin: EP2752546A2] The suspension has a wing door moving along direction of a longitudinal guide device. A support part is fixed with ends of the longitudinal guide device. A transverse guide device extending transversely to the longitudinal guide device along movement of a hinged door guided on a door frame opposite to the support part. A transmission mechanism is coupled with a rotary column and a connecting rod along the transverse guide device. An end portion of the rotary column is hinged with a rocker. A locking device is arranged between a support assembly and the transverse guide device.
