Abstract (en)

[origin: EP2752548A2] The drive device (1) has two actuators (3a,3b) that are assigned to respective wing doors. The simultaneous actuation of both the actuators is performed in a first operating direction during double door control. One of the actuator is actuated in a second operating direction during single door control, such that the second operating direction is pivoted about a vertical axis relative to the first operating direction.
