Abstract (en)

Embodiments of the present invention relate to a transmission rate control method, a mobility management entity, and a communications system. The transmission rate control method includes: receiving, by a first base station, a user equipment aggregation maximum bit rate UE-AMBR sent by a mobility management entity MME; determining, by the first base station according to the UE-AMBR, a first UE-AMBR used for the first base station and a second UE-AMBR used for a second base station, where the first base station controls, based on the first UE-AMBR, a transmission rate between the first base station and a user equipment UE; and sending, by the first base station, the second UE-AMBR to the second base station, so that the second base station controls, based on the second UE-AMBR, a transmission rate between the second base station and the UE. According to the embodiments of the present invention, for inter-base station carrier aggregation, it is achieved that the first base station controls, based on the first UE-AMBR, the transmission rate between the first base station and the user equipment UE and the second base station controls, based on the second UE-AMBR, the transmission rate between the second base station and the UE, thereby improving utilization of the UE-AMBR and ensuring stability of the transmission rate between each base station and the UE.
