Abstract (en)

[origin: WO2013036597A2] An animal specimen positioning system comprises a mount, at least two elongated receptacles sized and shaped to receive and hold an animal specimen, a connection system for securing the at least two elongated receptacles to the mount and an imaging adaptor for securing said animal positioning system to an imaging device. The at least two elongated receptacles may be configurable in a plurality of different orientations on the mount and the connection system may include a plurality of ports and connectors arranged in different positions. Various iterations of the animal specimen positioning system may together form a kit.
