Abstract (en)

[origin: WO2013034546A1] The present invention relates to fish-protein hydrolysates used in preventing and/or treating metabolic disorders, such as metabolic syndrome particularly associated with obesity. According to the invention, the fish-protein hydrolysates are obtained by means of the enzymatic hydrolysis of at least one protein source selected from the group including the following fish: *Micromesistius poutassou*, *Clupea harengus*, *Scomber scombrus*, *Sardina pilchardus*, *Trisopterus esmarki*, *Trachurus* spp., *Gadus morhua*, *Pollachius virens*, *Melanogrammus aeglefinus*, *Coryphaenoides rupestris*, and fish belonging to order Siluriformes, wherein said enzymatic hydrolysis is carried out using an endopeptidase enzyme derived from *Bacillus subtilis*.
