Abstract (en)

[origin: WO2013034148A2] The invention relates to a method for braking a rail vehicle (2) having at least two wheels (8), comprising a central control device (12) for specifying a common control variable (14) for both wheels (8) and a decentralized control device (10) for each wheel (8) in order to control the wheels (8) individually on the basis of an individual control variable (32) that is dependent on the common control variable (14), said method comprising the steps: - receiving the common control variable (14) from the central control device (12) in one of the decentralized control devices (10); - determining (30) the individual control variable (32) on the basis of the common control variable (14); and - braking (38) the wheel (8) associated with the decentralized control device (10) on the basis of the individual control variable (32).
