Abstract (en)

[origin: WO2013034866A1] The device (205) for broadcasting sound for the broadcast of audio content coming from at least one audio content server, comprises: a base (220) for supplying power to the device via a bulb socket, an electro-acoustic transducer (235), a means (230) for discovering a network comprising at least said server and at least one other device for broadcasting sound, and a means (230) for synchronising the broadcasting of sounds by said electro-acoustic transducer and the broadcasting of sounds by said other device. In certain embodiments, the device comprises: a means of exchanging messages with at least one other device for broadcasting sound and a means of selecting sound and/or light signals broadcast by said electro-acoustic transducer, according to the data received from at least one other device for broadcasting sound. In certain embodiments, the selection means is capable of selecting an audio track according to at least one audio track selected by another device for broadcasting sound.
