Abstract (en)
[origin: EP2754469A1] The crampon (1) has main portion that is provided with passage region (13) that cooperates with region of ski binding (100) so as to hold ski boot (600) in attached state. The crampon is pivoted along transverse direction of pivot axis of ski binding or ski along actuated position. The ski boot is pressed on top of passage region by applying force via specific area of ski binding in activated position. A spacer element (8) is arranged in upper portion of passage region for attaching the ski boot on passage region in activated position of crampon.
