Abstract (en)
A recording apparatus (1) includes a transportation mechanism (3) that has an adhesive belt (10) on which a recording target medium is placed and is capable of transporting the recording target medium intermittently, a pressure portion (12) that attaches the recording target medium to the adhesive belt, and a recording mechanism (4) that performs recording on the recording target medium. In the recording apparatus, a length of the pressure portion at a contact portion with the recording target medium in a transportation direction of the recording target medium is equal to or larger than a transportation distance of the recording target medium in one-time intermittent transportation when recording is performed on the recording target medium.
