Abstract (en)  
[origin: EP2754622A1] A cigarette box (CB) includes a box body (10) and a lid (20) connected to the box body by a hinge (11), and contains an inner pack (PC) with an inner frame (30) located therebetween, the inner pack including an inner wrapper (16) and a cigarette bundle wrapped in the inner wrapper. The inner wrapper (16) has front and rear faces (16-1, 16-2) respectively covering the front and rear faces of the cigarette bundle, a single bottom face (16-3) covering the lower end face of the cigarette bundle, and a closed face (16-4) exposably closing the upper end face of the cigarette bundle. The cigarette box further includes a pull-up mechanism including a first operator (16a) capable of moving back and forth as the lid (20) is opened and closed, and the pull-up mechanism pulls the rear face (16-2) of the inner wrapper upward as the operator moves in a forward direction, to cause the bottom face (16-3) of the inner wrapper to lift obliquely together with the cigarette bundle. The pull-up mechanism further includes a linear fixed portion (FP-1) where the inner wrapper is partly fixed to the box body (10) at a location near a boundary line (BL-1) between the front and bottom walls of the box body, and an interlocker (31) capable of interlocking forward movement of the operator with pull-up movement of the rear face (16-2) of the inner wrapper.
