Abstract (en)

[origin: EP2386518A1] The device has filling elements (102) provided with respective filling valves, filling tubes (104) and return gas tubes (103). The return gas tubes are arranged at a common support (106). A position of the common support is adjusted relative to a position of another support (105). A product channel is arranged in and/or at the latter common support, and connected with the filling tubes such that fluid is guided from the channel into the filling tubes and/or vice versa. The common supports are formed in circular shape. A vacuum channel and a return gas channel are separated from each other.
