Abstract (en)

[origin: EP2754761A2] The assembly has electrical control unit which inputs control parameters to electrical control elements (14-18). Control unit is coupled to actuators (1-4) to which electrical control elements are coupled for controlling actuators, based on control parameters. Control element sets stored standard control parameter to control unit in waking up process to start the outlet operation of water fitting (5), so that control unit stops the control of actuators and directs the actuators towards the outlet operation of water fitting, when control unit is operated in standby mode.
