Abstract (en)

[origin: EP2754784A1] The system has two profiles (2), where each profile includes a longitudinally extending groove for fixing in a vertical orientation to a post or stabilizing element such that the grooves of the two profiles are fixed at a neighboring post facing each other. Multiple filling elements (3) are provided between the profiles with mutually facing grooves (7) inserted one above the other such that the two grooves are held within a common plane, where edges of each groove are extended parallel to each other. The filling elements are connected to the profiles by bolts.
