Abstract (en)

[origin: EP2754805A2] The lock bar has a flange (18), and clamping brackets (13) formed with V-shaped cross-section and arranged at longitudinal sides of the flange. An outer bracket (14) is elastically moved towards an inner bracket (15). Hole rows (11) extend in a longitudinal axial direction, and formed parallel to each other in the flange. A support rod (19) is formed at an outer side of each clamping bracket in a connection area of the inner bracket with the outer bracket. A supporting part (21) is moved opposite to the support rod, where the lock bar is made from plastic, light metal or stainless steel.
