Abstract (en)

[origin: EP2754828A2] The intermediate element (20,40) has two opposite outer sides facing away from each other. The outer sides are adapted to be fastened at an associated portion. The associated part is adapted to be fastened at a movable or fixed portion of a wing system. An intermediate section having a section is adapted to couple the two portions with each other electrically and data technically. An independent claim is included for a method for mounting the intermediate element.
