Abstract (en)

[origin: EP2754841A2] The glazing structure (1) has a fire protection disc (2) whose an edge composite (13) forms a space filled with fire protection gel (14) between parallel glass panes (11,12,19,20). The edge composite is provided in a region of abutting edges formed immediately adjacent to a timber door panel (5) to inwardly form a groove. Two glass panes are moved to other two panes in region of abutting edges to form a stepped fold back portion. Glass surfaces (A,C) are formed with bar-shaped stop profiles. Bottom of door panel is pivotally arranged with fittings (7,8).
