Abstract (en)

[origin: EP2754845A2] The swing gear (10) has a fixing element (27) for providing an adjustment limit for the swing gear with respect to a support rail in the two end positions. The fixing element takes a fixing position in the former or later end position of the multi-disks and cooperates with the support rail by a force-fit, friction-locking or form-fit connection. The fixing element is moved from a release position into a fixing position by actuating the swing gear.
