Abstract (en)
[origin: EP2754847A1] The system has a control electronics (4) for controlling a motor (1) that moves a louver. Multiple terminals (5, 6) connect the control electronics with an external controller (7). The system is selectively operable in a first drive mode in which the external controller performs control of the motor over switching-on and off and/or a pole inversion of direct voltage and in a second drive mode in which the external controller transfers digital control signals to the control electronics for controlling the motor. The motor is designed as a brush motor or a brushless motor. An independent claim is also included for a building set for an insulation glass.
