Abstract (en)  
[origin: EP2754950A1] The spotlight (2) has a light source producing a light beam directed along a first axis (X) that is oriented toward front of a vehicle, where the spotlight comprises a lens. The light source projects the beam directly onto the lens without reflection or obturation. The lens is arranged to move in rotation about a second axis (Z) oriented toward a top part of the vehicle. The light beam has a shape elongated along the second axis. The light beam is projected by the lens, and forms an image with rectangular shape having short sides and long sides in a plane perpendicular to the first axis.
