Abstract (en)  
[origin: WO2013040443A2] Systems and methods for treating facial soft tissues of a patient in a healthcare or cosmetic treatment environment such as, for example, a spa, clinic, or a medical practitioner's office are presented herein. The facial treatment system includes a facial stimulator instrument and/or an acoustic oscillator to deliver therapeutic stimulation to the facial tissues of a patient including percussive massage, electrical stimulation, and acoustic stimulation. A facial treatment application executing on a processor of a computing device identifies a treatment protocol and operates the facial stimulator instrument and/or acoustic oscillator to implement the facial tissue treatment.
