Abstract (en)

[origin: EP2716462A1] The device (100) has a feeding unit (110) for a substrate (600) to be printed, a printing mechanism (120) and a discharge unit. A dissipating unit (130) for dissipating electrostatic charge from the substrate. A directing unit is arranged downstream of the device for directing electrostatic charge onto the substrate. The dissipating unit comprises a roller, a brush or a lip made from conductive material, and the carrier is connected with an electrical mass potential. The printing mechanism comprises an ink jet printhead. An independent claim is also included for a method for direct printing of decoration panels.
