Abstract (en)
[origin: WO2013038265A1] The invention relates to a navigation system (1) with access to road-mapping data (19), at least one microprocessor (11), at least one working memory (18), and a route-calculating module (13), in addition to: a module for generating navigation windows (14), allowing the route data to be formatted into a plurality of successive fixed windows, each one corresponding to at least one route instruction; a module for generating window-changing data, allowing data to be generated for automatically switching from one navigation window to another; a navigation module (43) for ensuring the transmission of the successive navigation windows to the user of the windows; and a window-changing module (47) for ensuring switching between windows according to the window-changing data.
