Abstract (en)
[origin: AU2012318300A1] This disclosure provides systems, methods and devices for communicating a message prior to enabling communication over a communication link between user devices. In one aspect the disclosure provides a method for communicating a message prior to enabling communication over a communication link between a user device and a second user device. The method may include receiving a request to initiate the communication link from the second user device, causing a notification of the request to initiate the communication link to be generated at the user device, receiving an acknowledgement from a user of the user device that the notification has been received, causing a message to be communicated to the user of the user device, receiving a user initiated acknowledgement from the user of the user device that the message has completed, and enabling communication between the users of the user device and second user device once the user initiated acknowledgement has been received.
