Abstract (en)

[origin: WO2013037032A1] A bandwidth management system, receiver, and method of managing bandwidth in a content delivery system are described. In one embodiment, the method includes: identifying two or more content items which are associated with at least some common content and which are temporally related; determining a relative priority of the least some of the identified content items; and allowing a receiver requesting the content associated with a lower priority content item to access a multicast associated with a higher priority content item.
